- ✓ Automated account reconciliation
- ✓ AI-powered transaction matching
- ✓ Exception detection & resolution
- ✓ Faster month-end and year-end closing
- ✓ Intelligent financial insights
- ✓ Audit-ready reconciliation history
- ✓ Natural-language finance operations with Copilot

How TALIA Works

Financial Data Collection

TALIA securely connects to your ERP, accounting systems, bank statements, and financial data sources. It automatically gathers transactions, balances, and supporting records for reconciliation.

Intelligent Reconciliation

Using Microsoft AI, TALIA compares transactions across multiple systems, automatically matching records based on predefined business rules, historical patterns, and configurable reconciliation criteria.

Exception Management

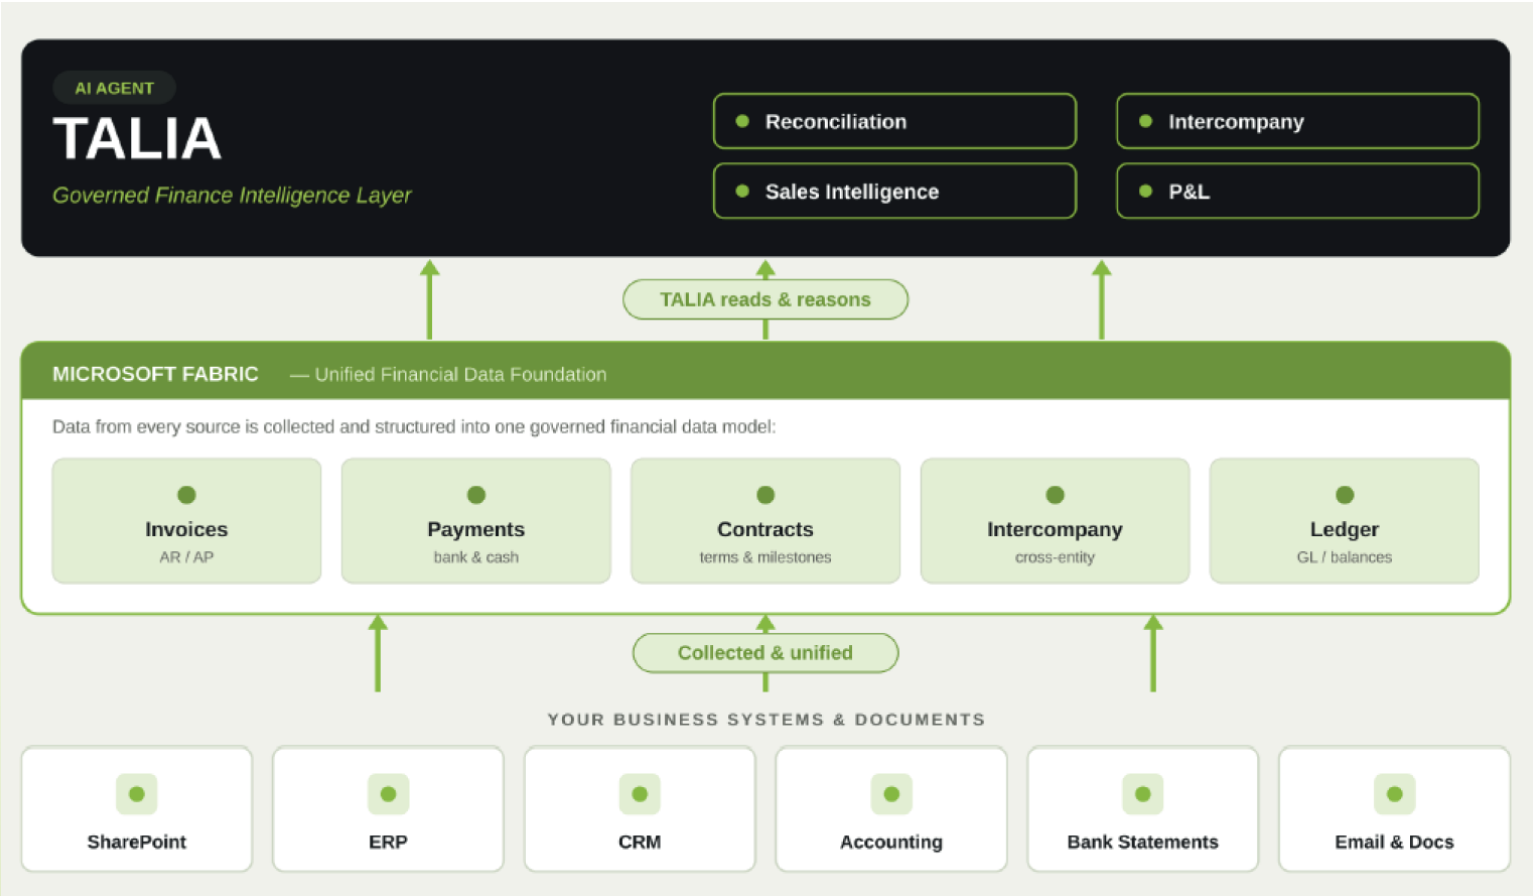

Unmatched transactions, discrepancies, and anomalies are automatically identified, categorized, and assigned for review with detailed explanations and AI-generated resolution recommendations.

Collaboration via Copilot

Finance teams interact with TALIA through Microsoft Copilot using natural language to review reconciliation status, investigate exceptions, generate reports, and request financial summaries instantly.

Continuous Financial Monitoring

TALIA continuously tracks reconciliation performance, monitors outstanding exceptions, and delivers dashboards and insights that help improve financial controls and operational efficiency.

Control Stays **With You**

TALIA never writes to your ledger. It works to three simple rules:

Automate

Handles the routine matching, analysis and reporting on its own.

Approve

Holds anything uncertain — an unusual match, an elimination — for a person to approve first.

Assign

Sends follow-ups and exceptions to the right owner, with the context they need.

TALIA's Editions

Basic

AUTOMATE THE CORE

Reconciliation and intercompany, end to end — matching, FX, break explanations, eliminations, credit-facility matching, slow-payer tracking, learning approvals and follow-ups. Works from your documents, SharePoint and bank statements.

Enterprise

FULL FINANCE INTELLIGENCE

Adds Sales Intelligence, cash forecasting and a consolidated P&L, with all your finance data unified on Microsoft Fabric and TALIA tailored to your systems.

Built by Procomix Technology Group

TALIA is built and delivered by **Procomix Technology Group** — the same team that will scope, tailor and support your deployment, backed by a track record in enterprise security, data and AI.
